

Front End Developer Job Description Template

We are looking for programmers with a keen eye for design and detail for the position of Front End Developer. Front end Developers are responsible for, among other duties, ensuring that design features do not interfere with the user experience and vice versa, optimising web pages for maximum efficiency and loading speeds, and maintaining brand consistency across every web page.

Front End Developers will be required to work alongside Back end Developers, Graphic Designers and User Experience Designers to ensure all elements of the project are consistent and produced to the highest quality standards possible. This requires excellent communication between teams and individual developers to identify the needs and requirements of the client and the best ways to implement those features.

Key Responsibilities:

- Determining the structure and design of web pages
- Ensure user experience determines design choices
- Developing features to enhance the user experience
- Communicating with clients and other team members to create a balance between functionality and aesthetic design choices
- Ensuring web design projects are correctly optimised for smartphone usage
- Provide technical knowledge and input to assist with the creation of a development plan and adhere to the timetable of the plan
- Producing reusable code
- Optimising web pages for maximum loading speed
- Maintaining brand consistency throughout the entire design

Personal Specification:

- Degree in Computer Science or related field
- Understanding of key design principles
- Proficiency with a wide variety of programming languages and technologies, including HTML, CSS, JavaScript and jQuery
- Proficient understanding of server-side CSS
- Experience with responsive and adaptive design
- Good problem solving skills
- Excellent verbal and written communication skills
- Good interpersonal skills
