Full Stack Developer Job Description Template

We are looking for a highly skilled programmer who is comfortable in both front and back end programming. Full Stack Developers are responsible for developing and designing front end web architecture, ensuring the responsiveness of applications and working alongside graphic designers for web design features, among other duties.

Full Stack Developers will be required to see out a project from conception to final product, requiring good organisational skills and attention to detail.

Key Responsibilities:

- Development of both front end and back end systems ensuring that no developments to either interfere with the other
- Ensure projects are fully optimised for smart phone use
- Working alongside graphic designers for web design features
- Seeing a project through from conception to finished product
- Design and development of APIs
- Meeting both technical and consumer needs
- Ensuring that functionality isn't hampered by aesthetic design choices
- Leadership of projects may also be required

Personal Specification:

- Degree in Computer Science or similar fields
- Strong organisational skills
- Project management skills are preferred but not essential
- Previous experience in full stack developer roles is preferred but not essential
- Strong working knowledge of front end languages such as HTML5, CSS3 and JavaScript
- Strong working knowledge of back end languages such as Python, Java, and PHP
- Knowledge database technology such as SQL, Oracle and Mongo
- Excellent verbal and written communication skills
- Good problem solving skills
- Excellent attention to detail
- Ability to work to tight deadlines
