Key Responsibilities:

- Design and implement Java based applications
- Analyse user requirements to influence and inform design
- Define the applications objectives
- Align application design with the goals of the client
- Develop software and test functionality
- Identify and resolve technical issues
- Produce detailed documentation
- Recommend potential changes to current Java based infrastructure
- Develop multimedia applications
- Develop documentation to aid end users

Personal Specification:

- Degree in Computer Science or similar field
- Experience with UI design, database structure and statistical analysis
- Analytical mind-set
- Good problem solving skills
- Excellent written and verbal communication
- Good organisational skills
- Ability to work as part of a team
- Attention to detail
