

# Web Developer Job Description Template

We are looking for a skilled Web Developer who will be responsible for developing and/or designing websites for our companies' clients. You will work alongside a team of developers in the creation and the maintenance of our clients' websites. You will also be responsible for updating their websites when needed and fixing any issues that may arise.

In order for you to succeed in this role, you will need to be proficient in JavaScript, HTML, CSS, and have solid knowledge and experience in programming applications.

## Key Responsibilities:

- Website and software design, building and maintenance
- Direct or perform Website updates
- Develop or validate test routines and schedules
- Edit, write or design Website content
- Maintain an understanding of the latest Web applications and programming practices
- Back up files from Web sites to local directories for recovery
- Identify and fix issues found by feedback and testing
- Evaluate code to check it works properly, is structured correctly and compatible mobile devices
- Determine user needs by analysing technical requirements

## Personal Specification:

- Degree in computer science or similar fields, or previous experience in relevant positions
- Strong knowledge of programming applications
- Willingness to work individually or as part of a team
- Strong written and verbal communication skills
- Able to develop ideas and processes
- Strong problem solving skills
